

January 17th 2012

To Whom it may concern

Via fax and email

Dear Sirs,

We make reference to the Agreement for the distribution of National Geographic Channel (the "Channel"), in the Territory of Czech Republic (the "Agreement").

This letter is to inform you that, due to unforeseen technical reasons, starting from January 17th 2012 up until, NGC's service provider shall change the frequency parameters of the Satellite delivering the Channel's feed, according to the following specifications:

CURRENT SATELLITE PARAMETERS

Satellite	Frequency	Polarization	FEC	Symbol. rate
Astra 3B	(MHz)			(kS/s)
23,5°E	11 797	Horizontal	3/4	27 500

NEW SATELLITE PARAMETERS

Satellite	Frequency	Polarization	FEC	Symbol. rate
Astra 3B	(MHz)			(kS/s)
23,5°E	11 895	Vertical	5/6	27 500

Please consider that, during the period starting from 17th of January 2012 and until the 31st of January 2012 we will work through a dual illumination of the Channel's feeds, to allow the proper test phase and migration. Starting from the 1st of February 2012 the availability of the Channel's feed on the current frequency on the Satellite will cease.

NGC Europe Limited company no 7168489
Shepherds Building East, Richmond Way
London W14 0DQ United Kingdom
